TECHNICAL NOTE

SGP Ionoplast Laminated Glass Evaluation of Conformity Notes per EN 14449:2005 (4 + 0.89 + 4 mm)

By Peter Lin

CNCGLASS · What EN 14449 packets usually answer

European laminated-glass files often need an EN 14449 evaluation-of-conformity style report. This article restates a CNCGLASS ionoplast laminate type test for a 4 mm clear + 0.89 mm ionoplast + 4 mm clear build-up.

Tech note (public method context): EN 14449:2005 is the product standard pathway for laminated glass and laminated safety glass, covering product description, initial type testing, factory production control, and marking.

CNCGLASS · Product and specimen

Product: laminated glass. Model: 4 mm clear glass + 0.89 mm ionoplast interlayer + 4 mm clear glass. Report J240718001-1, issue date 2024-10-30.

CNCGLASS · Observed conclusions

The report's binary conformity statements for the listed EN 14449 clauses (product description, definition of laminated glass, evaluation of conformity, initial type testing, FPC/sample inspection, factory inspection, continuous surveillance, and marking/labelling) are recorded as Pass for the submitted type.

Clause theme	Result
Product description / definition of laminated glass	Pass
Evaluation of conformity / initial type testing	Pass
Factory production control & surveillance themes	Pass
Marking and/or labelling	Pass

CNCGLASS · What this means for glaziers and buyers

- Use the exact 4 + 0.89 + 4 mm stack when citing this packet; do not stretch it to other gauges without new evidence.
- EN 14449 is a system document—pair it with the mechanical/optical tests your project actually calls.
- Ask CNCGLASS for matching Declarations and FPC support when CE or UKCA files are requested.
